

Call for Participation – 2019 TRB Annual Meeting Workshop  
Surrogate measures of safety for heterogeneous traffic: automation, cyclists and pedestrians

Sponsoring Committee:

Safety Data, Analysis and Evaluation (ANB20)

Co-Sponsoring Committee:

Pedestrian Committee (ANF10), Bicycle Transportation Committee (ANF20)

As traffic systems are evolving quickly with the automation of driving, the aspect of safety, particularly for the vulnerable road users, will remain highly important. In changing conditions, it is crucial to be able to assess safety quickly, which can only be done with non-crash observations or surrogate measures of safety. Such measures also help better understand the factors that lead to collisions. This workshop will cover the recent developments in the field, including automated data collection methods.
